dm

Allowable Subject Matter

3. Claims 41-55 and 61-65 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention teaches a method for remotely monitoring each of a plurality of network intrusion protection devices with a remote monitoring center. Each independent claim identifies the distinct feature of having each network intrusion device of a plurality of network intrusion devices operative to make the determination that the communication represents a security risk independently after being configured and without control from the remote monitoring center. The closest prior art, Proctor et al US Patent No. 6,530,024 teaches a host-based security policy system. The cited prior art fails to teach each network intrusion device of a plurality of network intrusion devices operative to make the determination that the communication represents a security risk independently after being configured and without control from the remote monitoring center and thus fails to anticipate or render the above limitations obvious (see Applicant's Argument's submitted 1/31/05 Pages 16-17). Thus, the cited prior art fails to anticipate or render obvious the above-cited claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the

issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
